Muhammad Asad Khan

CYBERSECURITY | SOC ANALYST | IT SUPPORT

asadkhan10c@gmail.com | +1 902-402-3126 | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Computer Science student at Dalhousie University (expected Dec 2026) with CompTIA Security+, Network+ and A+ certifications. Experience in Active Directory administration, security lab monitoring, Wireshark analysis and Python security tools.

TECHNICAL SKILLS

Security & monitoring: Wazuh SIEM, Sysmon, Suricata IDS, Wireshark, log analysis, alert investigation, FIM, custom rules
Networking & infrastructure: Nmap, pfSense, TCP/IP, firewalls, Active Directory, VMware, Windows, Ubuntu, Kali Linux
Programming & tools: Python, Bash, Git, GitHub, JSON, HTML/CSS, MySQL, Microsoft Excel

EXPERIENCE

IT Intern
Jun 2024 – Aug 2024

Burjeel Medical Hospital | Abu Dhabi, UAE

- Provisioned and maintained employee accounts in Active Directory, ensuring accurate user IDs, email addresses and onboarding records.
- Created audit sheets and removed redundant records to improve the organization and accuracy of IT data.
- Coordinated laptop and network switch distribution across hospital departments to support daily IT operations.

CYBERSECURITY PROJECTS

Home Security Operations Center (SOC) Lab | Wazuh, pfSense, Sysmon, Suricata

- Built a segmented virtual SOC environment with Kali Linux, Windows and Ubuntu behind pfSense; centralized Windows/Linux telemetry and Suricata alerts in Wazuh.
- Ran controlled SSH login, Nmap reconnaissance, Windows authentication and file-integrity scenarios; investigated related logs, alerts and detection gaps.
- Developed custom Wazuh rules for repeated SSH failures, configuration-file changes and encoded PowerShell; tested alert thresholds and reviewed false positives.
- Documented simulated incident timelines, detection evidence and recommendations to improve visibility and response.

Wireshark Network Traffic Analysis | Wireshark, Nmap

- Analyzed packet captures from Nmap and ARP-spoofing lab exercises using display filters to identify unusual ARP traffic, SYN activity and unauthorized connections.
- Documented packet-level findings with screenshots and recommended network controls, including firewall rules and ARP protections.

Failed Login Detector | Python | GitHub

- Built a Python tool that flags 5+ failed logins per IP in a configurable 60-second window and classifies alerts as MEDIUM (5–7) or HIGH (8+).
- Validated timestamps and malformed log entries, then saved detections to an alerts file for review.
- Used per-IP time-window analysis to distinguish bursts of failed logins from isolated authentication errors.

Network Reconnaissance Tool | Python, Nmap | GitHub

- Developed a menu-driven scanner for port, service/version and OS detection with target validation and configurable port selection.
- Parsed Nmap results into open ports and detected services, flagging potentially risky exposure such as Telnet, FTP and SMB.
- Generated timestamped TXT/JSON reports and maintained scan history for repeatable authorized testing.

CERTIFICATIONS

CompTIA Security+ Verify • **CompTIA Network+** Verify • **CompTIA A+** Verify

EDUCATION

Bachelor of Computer Science | Dalhousie University Expected Dec 2026
